Coding Problem 1:

- C. I used 9 registers in my program (v0, a0, s0, s1, s2, zero, t0, t1, ra)
- D. I used 1, 4, and 5 which are print_int, print_string, and read_int respectively.

Coding Problem 2:

- D. I think it is at 0x10010024 (that is the number at the register that I stored the array at in QtSpim)
